

BauSpaceFrame

The BauSpaceFrame is made of BauLadders that are shipped in very compact bundles or shipped as BauGridCages.

PreFormed and PreClad BauSpaceFrames are designed to support wet concrete using minimal shoring when used as floor slabs.

When used as Tied-Back BauRetWalls, the BauSpaceFrames can be filled with BauPlanterSoil, BauStaSoil or BauCrete depending upon the design loads.

BauSpaceFrames with BauFabricForm attached to the surface will allow rapid bottom-up placement of BauStaSoil and BauCrete.

Tall BauSpaceFrames can be used for BauSoilNailing of embankments.
