

BauTunnel

The BauTunnel is a dimensionally exact ($\pm 1/8''$) BauCage using BauLadders and rebar rolled (curved) to the tunnel liner radius.

The large number of identical BauLadders allow automation of the BauLadder manufacturing. The precise dimensions of the BauLadders allow implementation of labor saving processes for the assembly of the BauTunnel BauCages.

The entire relocatable process can be done next to the casting operation. Only compact bundles of pre-cut BauRodSets are shipped to the casting yard which will reduce shipping costs.
